---

Yes we met her + some possible interest from one of the Chinese delegation ([REDACTED]) who seemed to latch on to the idea of working with us on GIIRS + their uv-spectrometer (could be proactive about contacting that person).

There was a offline discussion on putting together new programme involving

[REDACTED] + [REDACTED], 2x Leicester people ([REDACTED]) – more on fire from land imaging)

in which it seemed the idea was RAL should put together overall programme involving WPs from York,Leicester + others, probably based on previous proposals (i.e. the one we had with [REDACTED] + a Leicester bid mentioned by [REDACTED]).

[REDACTED] was pushing it to be done like this rather than more open call as apparently lots of money to be spent in little time

(talk of needing to spend money by end of financial year).

Not sure how exactly how this will come together...

[REDACTED],

Hope this was a constructive engagement and [REDACTED] contacted you.

You may recall she collaborated with ourselves and [REDACTED] and in a previous STFC project and her team developed the DO3SE model for plant uptake of ozone, which they started to I/F to TOMCAT.

[REDACTED]
